

The Wharf – Chelmer Waterside, Chelmsford

Client: – Anderson Construction Ltd

Application: – Attenuation

Location: – Chelmer Waterside

System: – Permavoid 150

Job Type: – Housing

Date: – Oct - 2019

We received a call from a long-standing client of ours, who had a requirement on one of their sites for a Sub-base replacement attenuation system.

Knowing we are a specialist geomembrane lining company, they asked if we could help. With our strong ties & close relationships with manufacturers we knew we could turn this job around within a week, helping them keep to a tight schedule of works.

Client feedback:

Did we meet with your requirement?

The team at Scott Parnell were extremely helpful in the works carried out at one of our largest sites - Chelmer Waterside. Wendi and Dan went above and beyond to ensure our needs were met to the highest of standards.

Also, very importantly, the team who installed the tanks on site were extremely professional and worked very well with our site team which enabled a very successful installation.

Would you use us for future projects?

A strong relationship has formed between ourselves and Scott Parnell Water Management and I am positive we will continue to do works with them in the future.

Was the quality of our service satisfactory?

Time management, communication and quality of works from start to finish was second to none.

Liam Crancher – Assistant Quantity Surveyor for Anderson Group Ltd
